

## FortisBlue Imagelt™

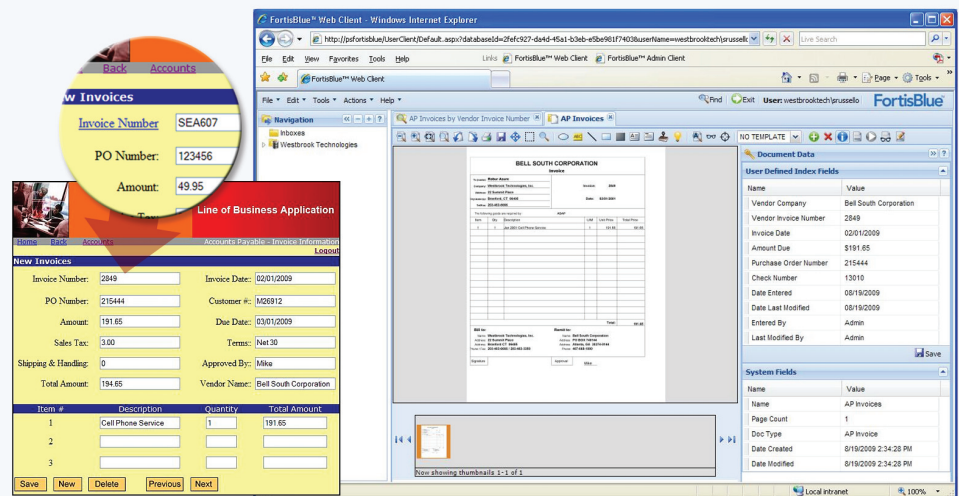

### Seamlessly link documents in FortisBlue with line-of-business applications

With **FortisBlue Imagelt** you can:

- Access supporting documents associated with transactions without leaving the business application or searching through paper files
- Deliver integration capabilities without custom code
- Introduce new functionality without retraining because users continue working in a familiar software application
- Retrieve documents with hot keys or CTRL + right click
- Improve efficiency and increase productivity

Many organizations face the challenge of finding an efficient and cost-effective way of sharing documents and data between business applications. The benefits of integrating disparate business systems are clear, but integration can involve custom programming and the prospect of decreased productivity while employees are learning a new system.

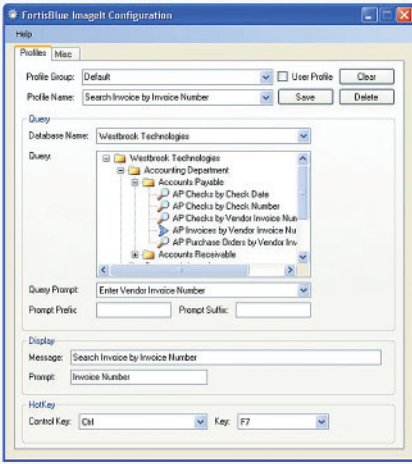

**FortisBlue Imagelt** resolves these issues by delivering seamless integration capabilities to connect core business applications with **FortisBlue** document management software, without the cost of creating custom code and retraining employees. For example, to confirm receipt of goods, a user working in an accounting application can, with one click, select a purchase order number to retrieve a corresponding invoice, packing slip, shipping form and delivery confirmation from **FortisBlue** without leaving the accounting application.

From within most business applications, a user simply mouses over a text value, selects a hot key, and the document(s) are retrieved instantly.

### Instant retrieval of information

**FortisBlue Imagelt** eliminates searching through paper files and the need to switch between disconnected systems to obtain information. The document needed to answer an inquiry, approve a transaction or verify status is readily available. And there's no new interface to learn so organizations gain efficiencies without spending time waiting for their staff to get up-to-speed on an unfamiliar system.

FortisBlue Imagent's intuitive administrative interface

## No programming required

**FortisBlue Imagent** achieves integration without the need for time-consuming API programming, scripting or any modification to the core business application. Administrators use a point-and-click interface to modify the configuration of **FortisBlue Imagent**, as necessary, when business processes change. The software works with text data from Windows applications, Web applications, UNIX, terminal emulators and some DOS-based applications. So it can work with almost any application your organization is already using.

## FortisBlue Imagent At-a-Glance

Feature	Advantage	Benefit
Retrieve documents directly from line-of-business applications	Instant document access from within a familiar software interface	- Eliminate manual searching - Quickly make more informed decisions
Hot key triggered	Access documents from simple keyboard/mouse shortcuts	- Save time - Increase efficiency and productivity
Point and click configuration	Do not need coding, scripting or modification of the line-of-business application	- Easy to administer - Do not need technical resources - Lower cost of ownership
Non-invasive integration	Integration continues to work following a business application upgrade or replacement	- Roll out quickly - Apply one set of logic to many business applications simultaneously
Application agnostic	Integrate with most Windows-based application: -Thick Client -Web-based -Terminal Emulator -Some DOS and UNIX	- Extends to all your current and future line-of-business systems
Secure document access	Implement easily by using existing <b>FortisBlue</b> security policies	- Allows multi-level security from database to document field
